

Tech jargon/lingo

paralysis analysis

good to go

ship it

respect the veto vote and not kick a dead horse

as with all ML models, every guideline can be interpreted in an adversarial fashion but I hope we can have a goodwill to build toward a positive sum collaboration.

turns into an endurance contest rather than discussion

PPMC - Podling Project Management Committee

Committer, Contributor, etc

non-binding vote (advisory)

cloning the repo for using a tool vs standalone package on PyPI - Python Package Index aka Cheese Shop, official 3rd

party s/w repo for Python

rally AMD behind MXNet

to do due diligence

bring them on board

LGTM - looks good to me

WIP - work in progress

nitpick - minor mistake

tbc - to be confirmed

make a blind bit of difference

continuum of complexity

race hasn't progressed far from the starting line

imbue someone's trust in you

1.3.1 release is considered patch release, which is for backward compatible bug fixes, while 1.4.0 release is considered minor release, which is for backward compatible new features. A major release would mean 2.0.

HITs(Human Intelligence tasks)

OKR objectives and key results

white list the ops

monkey patch the server

shepherd the feature

still have a few "I"s to dot and "T"s to cross

kicking the can down the lane for too long
